- Employee Tracking
- Customized Learning Paths
- Mobile Friendly Interface
- NxtQ Trivia & Gamification

Personnel Will Always Be Your Biggest Cybersecurity Risk

Did you know that over 90% of all enterprise cyber breaches occur because of an unsuspecting employee in the private sector or government personnel not being prepared in the basic steps of cybersecurity? Employees may be the biggest threat to your cybersecurity, but they can also be your most effective means of thwarting an attack. ThreatAdvice Educate provides your employees with the necessary cybersecurity knowledge and skills to help you avoid a cyber attack and keep your information secure.

The ThreatAdvice Educate Premium Solution

ThreatAdvice Educate's micro-learning, video-based cybersecurity courses and testing are easy for employees to understand and encourage engagement and completion. Tracking employee progress is a breeze for administrators.

Complementing the education piece are management and awareness tools to ensure compliance and oversight. ThreatAdvice Educate's phishing simulations put what your employees have learned to a real world test and provide data that is incorporated into an individual employee risk level scorecard where every single employee is rated individually as to his or her security risk to the enterprise. The ThreatAdvice Educate Company Threat Plan provides a high-level overview of the risk and health of the organization so you can address the vulnerabilities found in your workforce. Our extensive policies and procedures library can be used to create new policies or to supplement existing policies and is complemented by an audit/tracking mechanism account for employees who have/haven't acknowledged policies.

A cyberattack can be extremely damaging to your organization. Take the necessary steps to help ensure your company won't become a victim by implementing ThreatAdvice Educate today.
